PROFESSIONAL SUMMARY

Engineering leader with 11 years of experience shipping web, mobile, and cloud-native products across regulated and high-growth industries — iGaming, healthcare, financial services, and e-commerce. I have consistently owned end-to-end solution delivery: from scoping business requirements and defining system architecture to managing engineering teams, navigating compliance frameworks, and coordinating go-to-market timelines. Comfortable leading squads of 5–15 engineers, running sprint cadence, mentoring leads, and making trade-off calls between speed, quality, and scalability. My strongest value is translating ambiguous business problems into shippable, well-architected software that meets both regulatory and commercial goals.

CORE COMPETENCIES

Leadership	Engineering Team Management · Sprint Planning & Agile Delivery · Cross-functional Collaboration · Stakeholder Communication · Technical Mentoring · Vendor Coordination
Business Domains	iGaming & Sports Betting · Healthcare & Life Sciences · Financial Services · E-commerce & Retail · Media · Transportation & Logistics
Architecture	Solution Design · Microservices · Serverless · RESTful APIs · Event-Driven Systems · Cloud-Native Strategies · Regulatory Compliance Architecture
Frontend	React · Vue.js · Angular · Swift / SwiftUI · Flutter · Ionic · TypeScript · HTML5 / CSS3 / SCSS · ADA Compliance · Performance Optimization
Backend & Cloud	Node.js · Python · AWS (Lambda, AppSync, Cognito, EKS, CloudFormation, Amplify, Lex, SageMaker) · Docker
DevOps & Quality	CI/CD Pipelines · Jenkins · GitOps · Terraform · Argo CD · Helm · ESLint · SonarQube · Unit Testing

PROFESSIONAL EXPERIENCE

Associate Architect / Associate Delivery Manager / Solution Owner

Apr 2017 – Present

Presidio · Chennai & Coimbatore, India

Progressed from senior development roles to owning architecture and delivery for multi-million dollar client engagements. Currently leading engineering and compliance workstreams across international markets.

iGaming & Sports Betting

- Spearheading GLI-19 and GLI-33 compliance certification efforts, building AWS-based regulatory systems that enabled market expansion into Brazil, Peru, and Spain alongside an established US foundation.
- Designed and delivered internal GitOps tooling (ArgoCD) for Helm release management and a compliance dashboard for ECR image approval workflows — reducing deployment overhead and streamlining audit-readiness across jurisdictions.
- Coordinating directly with Gaming Laboratories International (GLI) and cross-functional stakeholders to align technical implementation with evolving market-specific compliance standards.
- Developed the iOS native sports betting application (Swift, SwiftUI, TCA pattern), migrating from Xamarin and engineering reusable component libraries shared across multiple product lines.

Healthcare & Life Sciences

- Architected a modular Flutter mobile framework for a medical instruments company, enabling multiple licensed modules to be composed into a single shell application with on-demand delivery - reducing time-to-market for new instrument integrations.
- Built a conversational AI interface for a major pharma company's medical professionals using Vue.js, AWS Lex, and Amazon Connect, owning the full stack from infrastructure (CloudFormation, CodePipeline) to frontend delivery.
- Integrated enterprise SSO (OAuth 2.0) ensuring secure, role-based access aligned with healthcare data handling requirements.

Financial Services

- Delivered an AI-powered chatbot for a US banking customer portal (Vue, AWS Lex, Lambda, Connect), enabling self-service account enquiries while meeting strict PII protection requirements through Ping Identity authentication and secure session management.
- Extended an enterprise asset management web application following highly regulated development protocols within AWS Workspaces, contributing to sprint planning and product roadmap improvement.

E-commerce & Retail

- Led a team of 4 engineers building and maintaining a large-scale e-commerce platform (WebSphere Commerce) for a major US-Canada online retailer — managing sprint ceremonies, task allocation, stakeholder demos, and content delivery via CoreMedia CMS.
- Developed B2B mobile and web applications for a US cutlery brand using Ionic, Angular, and AWS services, establishing pre-push quality gates (lint, test, format) that maintained 80% unit test coverage.

Media, Events & EdTech

- Built a B2B sports media seller platform (React, Terraform, AWS Kendra, AppSync) handling dual security layers for public and authenticated users — automated deployments via Jenkins with enforced code quality through SonarQube.
- Modernised a legacy JSP-based virtual events platform to Vue.js, integrating AWS Chime for real-time collaboration and implementing security hardening around token and cookie handling.
- Designed and led a team of 5 to deliver a WebRTC-based online examination proctoring platform (React, Node.js, Socket.IO) — owned the full lifecycle from wireframing (Adobe XD) to performance tuning for concurrent sessions.

Transportation & Logistics

- Led development of cross-platform mobile and web applications for a Canadian rail transport company, integrating SageMaker ML models and BlackBerry Radar IoT data for commodity tracking.
- Automated CI/CD pipelines (Amplify, Docker), deployed scalable Python REST APIs on Aurora Serverless, and established security vulnerability scanning across the codebase.

EDUCATION

Bachelor of Engineering

Anna University Affiliated, Chennai
