

Siddhu Nallasivam

Technical Engineering Manager

Coimbatore, India | +91 9384884604 | kousiksiddhu@gmail.com | linkedin.com/in/siddhu-nallasivam

PROFESSIONAL SUMMARY

Technical Engineering Manager with 11+ years driving delivery excellence, AI-enabled engineering, and team performance across iGaming, healthcare, financial services, and e-commerce. Accountable for end-to-end delivery assurance — from architecture strategy, compliance governance, and AI adoption roadmaps to people management, client stakeholder relationships, and delivery-led growth. Built and managed engineering teams of 5–15, owning sprint predictability, quality outcomes, and team utilization. Defined and operationalized AI-enabled development workflows — including AI agent design, skill creation, token optimization strategies, and a purpose-built AI Development SDLC — to improve delivery maturity across teams. Sustained 90%+ CSAT scores with 60% contract extensions by building trusted advisor relationships and converting delivery credibility into account growth.

KEY IMPACT HIGHLIGHTS

- 90%+ CSAT** across client engagements with zero critical escalations
- 60% Extensions** contract renewals driven by delivery trust and growth signals
- AI SDLC** designed end-to-end AI Development lifecycle for engineering teams
- 5–15 Engineers** managed with structured 1:1s, career plans, and performance coaching
- 6+ Domains** iGaming, Healthcare, FinTech, Retail, Media, Transport
- Multi-Market** compliance delivery across US, Brazil, Peru, Spain, Canada

CORE COMPETENCIES

Leadership	Engineering Team Management · People Development & Career Planning · Sprint Predictability & Agile Delivery · Performance Coaching & Feedback Cycles · Stakeholder Communication · Vendor Coordination · Utilization Management
AI & Automation	AI Adoption Strategy & Roadmapping · AI Agent Design & Skill Creation · AI Development SDLC · Prompt Engineering & Token Optimization · AI Workflow Design · Responsible AI Practices · GenAI-Assisted Development
Consulting	Client Stakeholder Management · Delivery-Led Growth · CSAT/NPS Outcome Ownership · Solution Proposals & Architecture Assessments · Business-Value Communication · Trusted Advisor Relationships
Architecture	Solution Design · Microservices · Serverless · RESTful APIs · Event-Driven Systems · Cloud-Native Strategies · Regulatory Compliance Architecture · NFR Mapping · Architecture Decision Records
Frontend	React · Vue.js · Angular · Swift / SwiftUI · Flutter · Ionic · TypeScript · HTML5 / CSS3 / SCSS · ADA Compliance · Performance Optimization
Backend & Cloud	Node.js · Python · AWS (Lambda, AppSync, Cognito, EKS, CloudFormation, Amplify, Lex, SageMaker) · Docker
DevOps & Quality	CI/CD Pipelines · Jenkins · GitOps · Terraform · Argo CD · Helm · ESLint · SonarQube · Unit Testing · Quality Gates · DORA-Aligned Practices
Business Domains	iGaming & Sports Betting · Healthcare & Life Sciences · Financial Services · E-commerce & Retail · Media · Transportation & Logistics

PROFESSIONAL EXPERIENCE

Associate Delivery Manager / Associate Architect

Apr 2017 – Present

Presidio · Chennai & Coimbatore, India

Progressed from senior development roles to owning architecture, delivery, people management, and AI enablement for multi-million dollar client engagements. Currently leading engineering and compliance workstreams across international markets while driving AI adoption strategy and team capability development.

People Management & Team Performance

- Managed engineering teams of 5–15 across concurrent engagements, owning goal alignment, staffing inputs, utilization tracking, and performance outcomes.
- Established structured people development cadence: weekly 1:1s for coaching and unblocking, monthly feedback cycles with self-reflection, quarterly skill-will matrix assessments and ratings calibration as pre-annual review, and formal annual performance reviews.
- Mentored and guided engineers from early-career uncertainty to full ownership — transforming individuals who struggled with client-facing confidence into domain owners leading end-to-end delivery independently.
- Developed targeted career plans addressing both soft skills (stakeholder communication, presentation confidence, conflict resolution) and technical ability (architecture thinking, cloud proficiency, AI adoption), resulting in measurable growth across the team.
- Identified skill gaps proactively and created capability development plans aligned to project needs, AI adoption targets, and individual career progression paths.
- Improved onboarding and ramp-up effectiveness through standardized documentation, buddy assignments, and knowledge transfer protocols — reducing time-to-productivity for new joiners.

AI Enablement & Engineering Transformation

- Defined and operationalized an AI Development SDLC — a structured lifecycle for planning, building, validating, and deploying AI-assisted engineering workflows across project teams.
- Conducted AI adoption strategy sessions across engagements, covering how AI can be leveraged across development, testing, documentation, and delivery reporting — addressing cost challenges, token consumption optimization, and responsible usage guardrails.
- Designed and built AI Agents and AI Skills for engineering workflows — including code review assistants, documentation generators, compliance validation tools, and sprint reporting automation.
- Created reusable AI workflow patterns and prompt libraries for repetitive project activities, improving team productivity and reducing manual effort in documentation and analysis tasks.
- Mentored engineers on safe and effective AI usage — establishing human-in-the-loop validation, data protection practices, and quality controls for all AI-generated output.
- Evaluated and strategized AI tooling adoption, balancing cost-efficiency (token consumption, API pricing) with delivery value and client policy compliance.

Client Impact & Delivery-Led Growth

- Sustained 90%+ CSAT scores across the majority of client engagements through proactive risk communication, transparent delivery health reporting, and outcome-oriented stakeholder management.
- Achieved 60% contract extension rate across engagements — a direct signal of trusted advisor positioning, delivery credibility, and client willingness to expand scope.
- Maintained regular client communication on delivery health, risks, trade-offs, and value delivered — converting delivery insights into growth opportunities including automation, modernization, and managed services expansion.
- Led solution walkthroughs, architecture assessments, and demo sessions tied to client acceptance, adoption improvement, and stakeholder confidence building.
- Supported account teams with estimation inputs, proposal support, and value-add recommendations derived from active delivery experience.

iGaming & Sports Betting

- Spearheading GLI-19 and GLI-33 compliance certification efforts, building AWS-based regulatory systems that enabled market expansion into Brazil, Peru, and Spain alongside an established US foundation.
- Designed and delivered internal GitOps tooling (ArgoCD) for Helm release management and a compliance dashboard for ECR image approval workflows — reducing deployment overhead and streamlining audit-readiness across jurisdictions.
- Coordinating directly with Gaming Laboratories International (GLI) and cross-functional stakeholders to align technical implementation with evolving market-specific compliance standards — establishing trusted advisor credibility with the client compliance team.
- Developed the iOS native sports betting application (Swift, SwiftUI, TCA pattern), migrating from Xamarin and engineering reusable component libraries shared across multiple product lines.
- Leveraged AI workflows for compliance documentation generation and regulatory mapping, reducing manual documentation effort and improving audit preparation turnaround.

Healthcare & Life Sciences

- Architected a modular Flutter mobile framework for a medical instruments company, enabling multiple licensed modules to be composed into a single shell application with on-demand delivery — reducing time-to-market for new instrument integrations.
- Built a conversational AI interface for a major pharma company's medical professionals using Vue.js, AWS Lex, and Amazon Connect, owning the full stack from infrastructure (CloudFormation, CodePipeline) to frontend delivery.
- Integrated enterprise SSO (OAuth 2.0) ensuring secure, role-based access aligned with healthcare data handling requirements.
- Presented solution architecture and integration approach to client stakeholders, improving confidence in platform adoption and supporting positive CSAT outcomes.

Financial Services

- Delivered an AI-powered chatbot for a US banking customer portal (Vue, AWS Lex, Lambda, Connect), enabling self-service account enquiries while meeting strict PII protection requirements through Ping Identity authentication and secure session management.
- Extended an enterprise asset management web application following highly regulated development protocols within AWS Workspaces, contributing to sprint planning and product roadmap improvement.
- Identified automation opportunities during delivery that contributed to scope expansion and follow-on engagement discussions.

E-commerce & Retail

- Led a team of 4 engineers building and maintaining a large-scale e-commerce platform (WebSphere Commerce) for a major US-Canada online retailer — managing sprint ceremonies, task allocation, stakeholder demos, and content delivery via CoreMedia CMS.
- Developed B2B mobile and web applications for a US cutlery brand using Ionic, Angular, and AWS services, establishing pre-push quality gates (lint, test, format) that maintained 80% unit test coverage.
- Owned client-facing demos and release walkthroughs, translating technical deliverables into business-value narratives for non-technical stakeholders.

Media, Events & EdTech

- Built a B2B sports media seller platform (React, Terraform, AWS Kendra, AppSync) handling dual security layers for public and authenticated users — automated deployments via Jenkins with enforced code quality through SonarQube.
- Modernised a legacy JSP-based virtual events platform to Vue.js, integrating AWS Chime for real-time collaboration and implementing security hardening around token and cookie handling.
- Designed and led a team of 5 to deliver a WebRTC-based online examination proctoring platform (React, Node.js, Socket.IO) — owned the full lifecycle from wireframing (Adobe XD) to performance tuning for concurrent sessions.

Transportation & Logistics

- Led development of cross-platform mobile and web applications for a Canadian rail transport company, integrating SageMaker ML models and BlackBerry Radar IoT data for commodity tracking.
- Automated CI/CD pipelines (Amplify, Docker), deployed scalable Python REST APIs on Aurora Serverless, and established security vulnerability scanning across the codebase.
- Supported client solution discussions on ML model integration and data pipeline architecture, contributing to scope clarity and delivery confidence.

EDUCATION

Bachelor of Engineering

Anna University Affiliated, Chennai
